Rostrum delivery report

demo_rushing - text demo_anaphora - 7.5 s

Reference mode: compared word by word against 5 skilled reading(s) of this exact text.

7.66 / 10

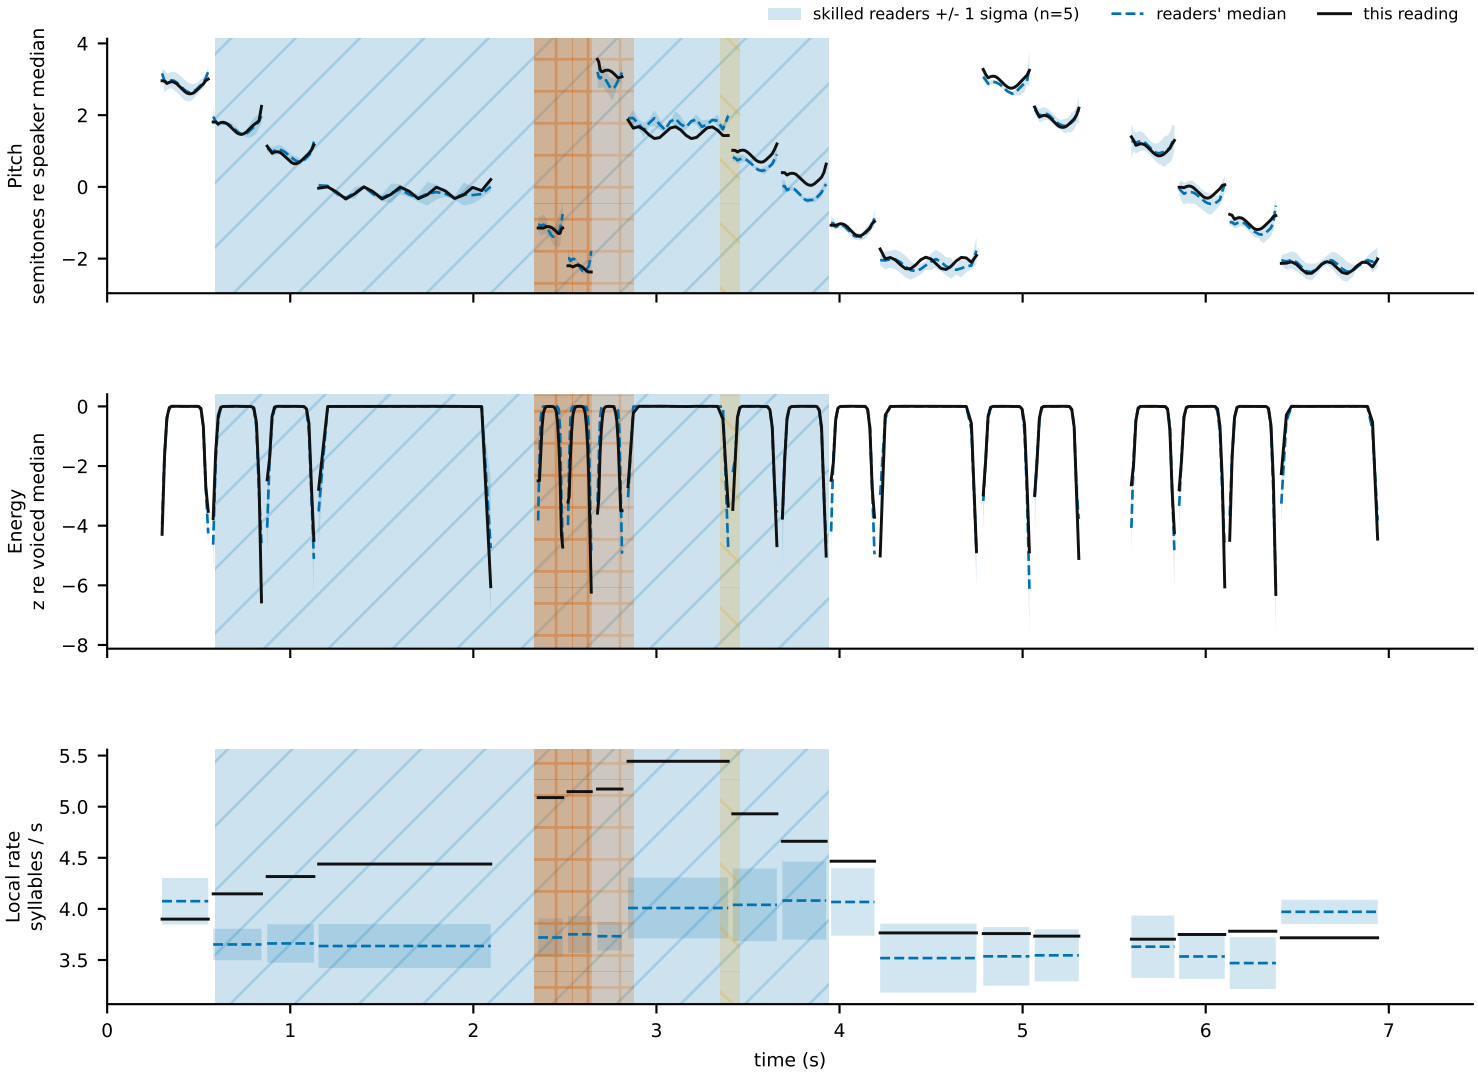

+/- 0.12 (leave-one-reference-out)

Descriptors vs skilled readers

articulation rate syll s: 4.60 (readers 4.00-4.56, n=5)
mean length of runs syll: 8.67 (readers 8.67-13.00, n=5)
pause rate per min: 18.07 (readers 7.45-16.38, n=5)
pitch variation st: 1.78 (readers 1.72-1.85, n=5)

This reading against the envelope of skilled readings; shaded spans are flagged regions

Every number and timestamp is computed by DSP; no language model is in the scoring loop. Times are seconds from the start of the processed 16 kHz WAV.

Flaw regions 1-3 of 4

Each region is a time span, a measured deviation, and what to do about it.

0.592 - 3.943 s | Pace: rushing | L0 - within the envelope | confidence 0.92

"*can not dedicate, we can not consecrate. We can*"

feature	you	readers	sigma	z
rate_local	5.17	3.73	0.188	+7.67
rate_relative	1.19	1.02	0.0141	+12.00
duration_rel_median	0.508	0.96	0.0276	-12.00

Why: Across "can not dedicate, we can not consecrate. We can" the speaking rate reaches 5.2 syll/s, 7.7 sigma above the skilled readers' 3.7 syll/s here; rate_relative is 1.19 x speaker rate against a reader median of 1.02 x speaker rate (12.0 sigma); duration_rel_median is 0.51 x median against a reader median of 0.96 x median (-12.0 sigma).

Fix: Slow "can not dedicate, we can not consecrate. We can" to about 3.7 syll/s, which is 1.4 syll/s slower than this 3.35 s stretch is read now.

2.333 - 2.644 s | Energy: low_energy | L0 - within the envelope | confidence 0.92

"*we can*"

feature	you	readers	sigma	z
energy_slope_db_s	-12.9	-1.97	2.2	-4.96
rate_relative	1.19	1.02	0.0141	+12.00
duration_rel_median	0.508	0.96	0.0276	-12.00

Why: Across "we can" the loudness falls at -12.9 dB/s, 5.0 sigma steeper than the skilled readers' -2.0 dB/s, so the phrase fades away rather than holding its level; rate_relative is 1.19 x speaker rate against a reader median of 1.02 x speaker rate (12.0 sigma); duration_rel_median is 0.51 x median against a reader median of 0.96 x median (-12.0 sigma).

Fix: Keep the level up to the end of "we can": the readers lose only -2.0 dB/s, so plan the breath for the whole phrase.

2.333 - 2.873 s | Energy: low_energy | L0 - within the envelope | confidence 0.92

"*we can not*"

feature	you	readers	sigma	z
energy_rel_z	-1.17	-0.65	0.0668	-7.70
duration_rel_median	0.508	0.96	0.0276	-12.00
rate_relative	1.19	1.02	0.0141	+12.00

Why: Across "we can not" the relative loudness is -1.2 z, 7.7 sigma below the skilled readers' -0.7 z; duration_rel_median is 0.51 x median against a reader median of 0.96 x median (-12.0 sigma); rate_relative is 1.19 x speaker rate against a reader median of 1.02 x speaker rate (12.0 sigma).

Fix: Support "we can not" with more breath and bring the level back to about -0.7 z.

Flaw regions 4-4 of 4

Each region is a time span, a measured deviation, and what to do about it.

3.353 - 3.453 s | Pausing: missing_pause | L0 - within the envelope | confidence 0.92

"*consecrate. We*"

feature	you	readers	sigma	z
gap_duration	0.0254	0.545	0.0542	-9.59

Why: The boundary pause after "consecrate." lasts 0.03 s where the skilled readers held 0.54 s before "We", 9.6 sigma short of the envelope.

Fix: Hold a pause of about 0.54 s after "consecrate.", before starting "We".
